Examen final- GTICS

Nombre: Gerardo Manuel Gutierrez Aguilar

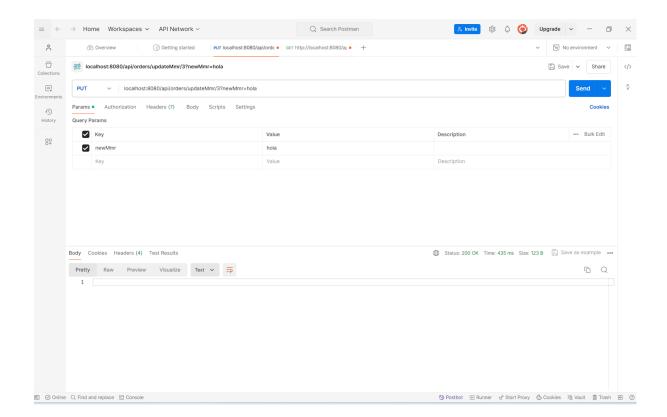

1. Usamos el metodo

GET v localhost:8080/api/orders/

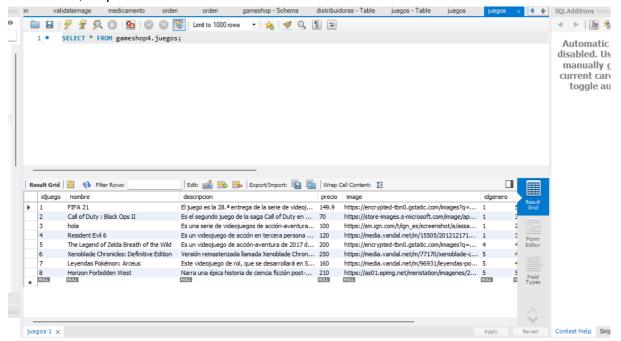

Actualizar

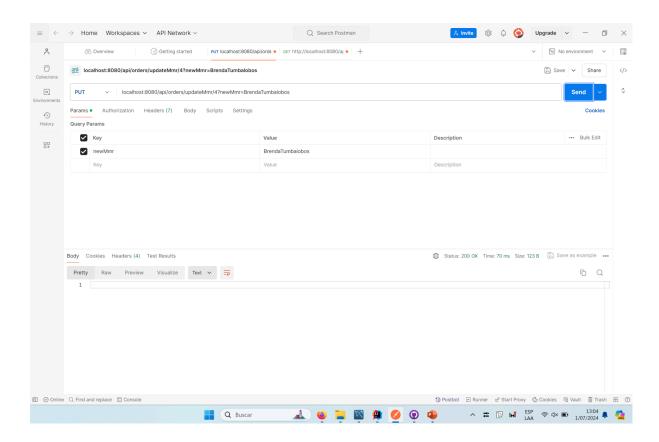

Estamos cambiando el de id =3

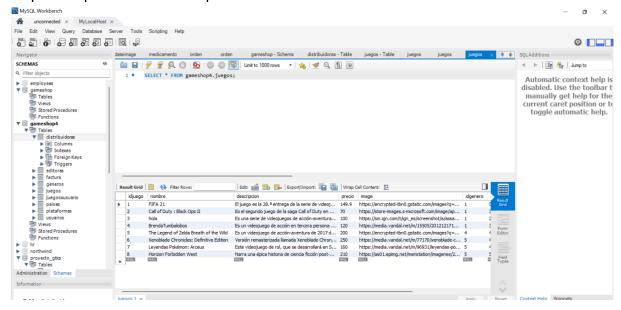

Finalmente, se puede visualizar el cambio

Otro ejemplo,

Se puede apreciar en el id=4 que cambia el nombre

Finalmente el codigo que se ha usado,

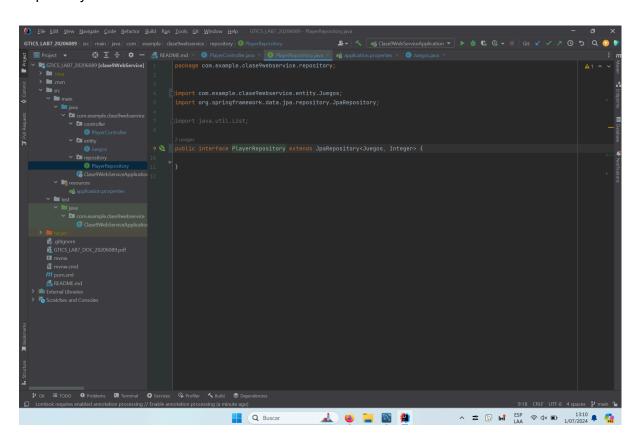

Logica de controller

```
@GetMapping(©~"/")
                                                                                    A 4 A
public List<Juegos> getLeaderboard() {
   String var= "success";
@PostMapping(@>"/add")
public void addPlayer(@RequestBody Juegos player) {
   playerRepository.save(player);
   recalculateLeaderboardPositions(player.getIdjuego());
@PutMapping(@>"/updateMmr/{idjuego}")
public void updatePlayerMmr(@PathVariable int idjuego,@RequestParam String newMmr) {
   Juegos player = playerRepository.findById(idjuego).orElse( other: null);
   if (player != null) {
       player.setName(newMmr);
       playerRepository.save(player);
       recalculateLeaderboardPositions(player.getIdjuego());
@DeleteMapping(@>"/delete/{idjuego}")
public void deletePlayer(@PathVariable int playerId) {
   Juegos player = playerRepository.findById(playerId).orElse( other: null);
   if (player != null) {
       playerRepository.delete(player);
